NOTICE OF PUBLIC HEARING**

**PROPOSED  
WASTE DISCHARGE REQUIREMENTS (WDRs) AND  
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMIT**

<b>Discharger</b>	<b>Discharge Location</b>	<b>Receiving Water</b>
Santa Clarita Valley Sanitation District (Saugus Water Reclamation Plant) (CA0054313)	26200 Springbrook Ave. Santa Clarita, CA 91350	Santa Clara River (Reach 6)

The Santa Clarita Valley Sanitation District (SCVSD or Discharger) is currently discharging tertiary treated effluent from its Saugus Water Reclamation Plant (Saugus WRP) to Reach 6 of the Santa Clara River, a water of the United States. The discharge is regulated under waste discharge requirements contained in Order No. R4-2015-0072, adopted by the California Regional Water Quality Control Board Los Angeles Region (Los Angeles Water Board), on April 9, 2015. Order Number R4-2015-0072 serves as a permit under the National Pollutant Discharge Elimination System (NPDES No. CA0054313). The Discharger filed a report of waste discharge (ROWD) and applied for reissuance of its Waste Discharge Requirements (WDRs) and NPDES permit on November 1, 2019, to discharge tertiary-treated effluent. The application was deemed complete on March 24, 2020. The terms and conditions of the current NPDES order have been automatically continued and remain in effect until new WDRs and NPDES permit are adopted pursuant to this Order.

The Discharger owns and operates the Saugus WRP, a publicly owned treatment works, located at 26200 Springbrook Avenue, Santa Clarita, California, with a design capacity of 6.5 million gallons per day (mgd). The Facility treats wastewater consisting of domestic and industrial wastewater. The wastewater is generated at the City of Santa Clarita and unincorporated areas of Los Angeles County. Treatment at the Facility consists of influent screening, primary sedimentation, activated sludge biological treatment with nitrification and denitrification, secondary sedimentation, inert media filtration, disinfection (UV and/or chloramination), and dechlorination (as needed). Treated wastewater discharged to the Santa Clara River is dechlorinated when chloramines are used as the disinfecting agent. Tertiary-treated effluent is discharged from the Saugus WRP to Reach 6 of the Santa Clara River at the discharge point 001 (Latitude 34.423677°N, Longitude 118.540583°W).

Biosolids from the Saugus WRP are transported via pipeline to the Valencia WRP for processing and hauling offsite.

On the basis of preliminary staff review and application of lawful standards and regulations, the California Regional Water Quality Control Board, Los Angeles Region (Los Angeles Water Board), tentatively proposes to issue waste discharge requirements, including effluent limitations and special conditions.
